SUMMARY

Software Engineer with 4+ years of experience building scalable backend systems, AI-driven applications, workflow automation platforms, and real-time communication infrastructure using Node.js, Golang, React.js, PostgreSQL, AWS, and distributed system architectures. Experienced in retrieval-augmented AI systems, multimodal search pipelines, event-driven integrations, and cloud-native application development.

SKILLS

Languages: JavaScript, TypeScript, Golang

Backend & APIs: Node.js, Express.js, PostgreSQL, MongoDB, Redis, RabbitMQ

Frontend: React.js

Cloud & DevOps: Amazon Web Services (EC2, S3, Lambda, RDS), Docker, Nginx, PM2, Fluent Bit, CIDD

AI & Search: RAG, LangChain, Vector Search, OpenAI Embeddings

Tools & Others: Git, Prisma, Sequelize, Cursor, Claude

EXPERIENCE

SOFTWARE ENGINEER — NeoITO | Kochi, India

July 2022 – Present

- Architected retrieval-augmented AI systems using LangChain, OpenAI embeddings, OCR pipelines, CLIP-based visual search, and Qdrant vector search to power multimodal product identification and contextual conversational experiences.
- Designed and scaled a low-code workflow automation platform that improved workflow creation efficiency by 65–75%, enabling configurable automation, event orchestration, and real-time business process management.
- Architected and scaled AI-driven communication systems and distributed backend services powering chatbot automation, real-time messaging, scheduling, and customer engagement workflows.

- Engineered event-driven integration systems with platforms including Shopify, implementing webhook orchestration, lead synchronization, and automated business workflow processing.
- Architected resilient shipping and order-processing infrastructure integrated with Shiprocket, optimizing checkout reliability, latency, and fault tolerance for high-volume transaction workflows.
- Built serverless media processing pipelines using Amazon Web Services Lambda, S3, and FFmpeg to automate video transcoding, re-encoding, and scalable media delivery.
- Developed scalable backend systems and frontend applications using Node.js, Golang, React.js, PostgreSQL, Redis, RabbitMQ, Docker, and AWS cloud services.

ASSOCIATE SOFTWARE ENGINEER — Infospica | Remote, India

Nov 2021 – June 2022

- Contributed to scalable frontend and backend web application development using modern JavaScript frameworks and RESTful backend services.
- Developed and integrated backend APIs and application features focused on performance, maintainability, and scalable architecture.

PROJECTS

Happilee.io (happilee.io)

- Contributed to scalable AI-powered communication and workflow automation systems supporting chatbot orchestration, broadcast messaging, and real-time customer engagement workflows.
- Collaborated with clients and cross-functional stakeholders to gather requirements, define scalable technical solutions, and drive end-to-end feature delivery for business-critical product workflows.

Real-time Drone Fleet Monitoring Dashboard

- Built a realtime telemetry pipeline with a backend simulator, Redis Pub/Sub fanout, and websocket subscription routing.
- Implemented frontend state hydration plus patch-based updates to efficiently render drone status, selected-map views, and live metrics.
- Added simulator control APIs and health checks for easier testing and production readiness.

E Plant

- Architected and developed a full-stack ecommerce platform for plant and pot purchasing, supporting online payments through Razorpay and offline order management workflows.
- Built scalable backend services using Node.js, Express.js, and MongoDB to manage product catalogs, order processing, payment handling, and inventory workflows.
- Developed user-facing and administrative applications for product management, order tracking, and operational workflow management.

Mentorship Platform

- Developed a scalable mentorship and skill-development platform enabling users to join mentor-led learning groups, follow structured learning roadmaps, and track skill progression through milestone-based learning workflows.
- Built frontend and backend systems using React.js, Node.js, and PostgreSQL, implementing user management, group collaboration, progress tracking, and learning workflow features.
- Managed cloud deployment and application hosting on Amazon Web Services EC2, including server configuration, deployment workflows, and production environment management.

AppBlocks

- Worked as a backend engineer building reusable backend modules using Golang, PostgreSQL, Redis, and Docker.
- Conducted code reviews to maintain code quality and best practices.

EDUCATION

Bachelor of Computer Applications (BCA)
Bangalore University | 2018 – 2021
