PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building scalable full-stack applications, distributed backend systems, and AI-powered platforms. Strong experience with Node.js, TypeScript, React, PostgreSQL, Redis, RabbitMQ, AWS, and LLM-based systems, with a focus on backend architecture, event-driven systems, workflow automation, and AI-driven applications.

CORE COMPETENCIES

Languages: TypeScript, JavaScript, Go

Frontend: React.js

Backend: Node.js, Express.js, REST APIs, PostgreSQL, MongoDB, Redis, RabbitMQ, Prisma, Sequelize, SQS

AI & Search: LangChain, OpenAI, LLMs, AI Agents, RAG, Vector Search, Qdrant, OCR, CLIP

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS), Docker, Nginx, PM2, Fluent Bit, CI/CD

Engineering: Distributed Systems, Event-Driven Architecture, System Design, Performance Optimization, Workflow Automation, Real-Time Systems

PROFESSIONAL EXPERIENCE

Software Engineer | NeoITO

July 2022 – Present

- Designed and built a configurable low-code workflow automation platform with an extensible execution engine supporting reusable nodes for Meta Cloud API, Google Sheets, Webhooks, and REST integrations. . Leveraged RabbitMQ for asynchronous workflow execution, scheduling, and event orchestration across 300+ businesses, processing over 10,000 daily customer interactions.
- Designed and implemented an intent-driven conversational agent using LLMs, structured outputs, and instruction prioritization to identify user intent, make context-aware decisions, and dynamically orchestrate multi-turn conversations toward goal completion.
- Designed and implemented a multimodal RAG pipeline using LangChain, OpenAI, Qdrant, OCR, and CLIP, with asynchronous ingestion through RabbitMQ to optimize embedding generation, improve retrieval quality, and enable AI-powered product identification. .
- Built event-driven Shopify integrations using webhooks to synchronize leads and automate downstream business workflows.

- Designed and implemented the e-commerce order fulfillment pipeline, orchestrating address validation, shipping rate calculation, order processing, Shiprocket integration, and shipment tracking, reducing processing failures by 78%.
- Implemented a serverless media processing pipeline using AWS Lambda, Amazon S3, and FFmpeg to asynchronously process and deliver media assets at scale.

Associate Software Engineer | Infospica

November 2021 – June 2022

- Developed cross-platform mobile applications using React Native, integrating REST APIs and building reusable application components for production features across Android and iOS platforms.

PROJECTS

Happilee.io - B2B Workflow Automation Platform

- Contributed to the development of a market-facing B2B platform that combines low-code workflow automation, business integrations, and AI-powered capabilities to automate customer interactions and operational workflows.
- Developed core platform capabilities spanning workflow orchestration, AI agents, multimodal RAG, and integrations with third-party business platforms, enabling businesses to automate customer engagement and product discovery.

Appblocks - Developer Platform

- Contributed to the development of standardized and reusable software blocks, designing backend components and APIs that abstract common application functionality and accelerate application development through consistent, modular building blocks.

Distributed Notification Platform

- Designed and implemented a distributed notification platform using RabbitMQ for asynchronous message processing, supporting email notifications with retry policies, dead-letter queues, and scheduled delivery.
- Built an extensible notification architecture using Dependency Injection and the Strategy Pattern, enabling pluggable providers, idempotent processing, and Redis-based rate limiting.

EDUCATION

Bachelor of Computer Applications (BCA)

Bangalore University | 2018 – 2021
